          N. Y. Acad. Sci. 723:258-270(1994).

FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final difference of the surface of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation hepatocytes it induces acute phase reactants.

"Cloning and expression of interleukin 6 gene from Landrance hybrid swine.";
           Submitted (SEP-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential ein the final differentiation of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants.
                                                                                                                                                                       Mathialagan N., Bixby J.A., Roberts M.R.                              DC. SEXD. Biol. Med. 204:301-305(1993).

FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants.

SUBCELLULAR LOCATION: Secreted.

SIMILARITY: Belongs to the IL-6 superfamily.

Allergy Immunol. 113:409-416(1997).

FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiat of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, ir hepatocytes it induces acute phase reactants.

SUBCELULIAR LOCATION: Secreted.

SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             125

Mucleotide sequence of bovine interleukin-6 cDNA.";

NA Seq. 2:411-413(1992).

INA Seq. 2:411-413(1992).

INA Seq. 2:411-416 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants.

-i FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiat of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, it hepatocytes it induces acute phase reactants (By similarity).

-i- SUBCELLULAR LOCATION: Secreted.

-i- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
